

Internet Filtering at Home: Securly

For your child's safety, internet filtering through Securly is still in place when iPads are used at home. (Traffic is routed through our proxy server even when on home wifi.) Students will periodically need to authenticate using their Gmail & password.

If you get the Securly window shown below, select **Login with Google** and type in your Gmail & password. All Gmail passwords follow this pattern: Apple####. (Teachers & Tech people have access to this information.) If it lets you in, great. If not, that means it is blocked by our filter and you cannot access it.

Contact it@alexandriaschools.org with any questions.
